To whom it may concern,

I am writing to confirm our involvement in Professor Mo Ehsani's development of a re-usable plastic track profile that can be used to build cylindrical forms for casting concrete columns.

Reschcor has been a leader in profile extrusion since our inception in 1982. We partner with many large manufacturers of building products, including those in the concrete industry. Together with our manufacturing partners we have launched many innovative products over the years often assisting in material selection and extruded profile development.

Reschcor is currently assisting Form-A-Tube LLC in the development of the aforementioned concrete form products. We are pleased to be partnering with Form-A-Tube LLC on this innovative product that has a bright future in the industry.

Reschcor is a privately-held corporation that was established in 1982. Our philosophy is that every customer should feel like our only customer. We continually deliver superior, quality products and exceptional customer support on all custom plastic extrusion applications.

Reschcor is located in Bristol, Indiana approximately 120 miles from Chicago and 150 miles from Indianapolis. Our convenient Midwest location is attractive to both local and national customers. We work diligently to ensure all customers receive top notch professional service and quick response to all inquiries.

Best Regards,

Chuck Marino
Director of Sales and Business Development
